Profile

Oluwatosin Oloruntoba
SOFTWARE DEVELOPER

Backend engineer with experience in building quality solutions for individuals, businesses and government using HTML5, CSS, jQuery, PHP, Drupal, SQL with a commitment to writing highly performing and easily maintainable codes.

Projects

National Identity Management System (NIMC) Integration

MAY 2021 – OCTOBER 2021

Development of an API to request for an individual's data from the national databank using the National Identification Number (NIN).

Federal Capital Territory Public Transport Management System (FCT PTMS)

JUNE 2020- TILL DATE

Development and maintenance of a web portal for the registration and licensing and monitoring of public transport within the country's capital. It involves retrieval of prospective riders' record from the national databank, validation of rider's vehicle and driving licensing and mapping of each rider to his/her vehicle to aid security checks.

Telospace

SEPTEMBER 2019- TILL DATE

Developed the API for the mobile application (an Android bill payments application) which integrated to third-party endpoints for vending and funding the wallet system. Also, developed the admin-end for reporting. I also provide maintenance and update when needed.

Astute Portal

JUNE 2019 — TILL DATE

Developed a management system and e-payment solution for a school. It is used to register new and existing students, staff and parents. It also manages the cash flow of the accounting department by recording expenditures by bank or cash and cash inflow. In addition, it integrates to a payment platform to allow online payment of fees and other dues with a proper reporting system.

Vuvaa Agent

APRIL 2018 – TILL DATE

Development of a RESTful API service for a mobile banking platform. It communicates with the mobile applications and Point of Sale (POS) terminals for transactions. I also handled the merchant settlement platform.

Nigerian Inter-Bank Settlement System (NIBSS) Integration

JULY 2017 – AUGUST 2017

Integrated the company's wallet system to NIBSS platform to allow real-time payment into the wallet from any bank branch or platform.

Abuja Inspector

OCTOBER 2017 – TILL DATE

Development and maintenance of a RESTful API service to provide vehicle inspection officers information about vehicles on-the-go when on road patrol for proper identification of defaulting officers. It allows offers modules to book offenders, generate and make payment for offences, make payment for pins needed to register or renewal vehicle licenses.

Lagos State Computerized Vehicle Inspection Service (LACVIS)

JULY 2017 – TILL DATE

Developed a RESTful API for the integration of the mobile application to the backend services for payment and pin generation required to perform vehicle inspection in the state. In charge of the maintenance and updates on request of the admin portal for report generation, settlement generation and users management.

Employment History
